ABSTRACTED-PUB-NO: JP08167479A

BASIC-ABSTRACT: A film has a high-low difference at the surface of 1-10 nm/ μ m², a work function at the surface of 5.1-6.0 eV, a surface resistivity of 3-50 π /in² and a visible light transparency at 450-800 nm of thickness including substrate of 75-90%.

USE - The film is suitable for planer emission film LED (light emitting diode) e.g. an organic thin film electro-luminescence element.

ADVANTAGE - The element has improved running life.
